

SCiQ In-Lane

Scientific Games and Abacus Solutions are working in partnership to offer a secure solution for shoppers to purchase lottery draw and instant games in retail checkout lanes.

In most large retail locations, this convenience is not yet available and lottery games are purchased at a separate customer service counter or via a self-service machine.

Abacus, which has a significant penetration in supermarkets and big box stores, is a lottery technology partner that securely connects lottery systems technology directly through a retailer's point-of-sale technology.

Research shows that in grocery stores only 5% of shoppers visit the area of the store where the lottery terminal is located and games can be purchased.

The Abacus and Scientific Games in-lane solution puts lottery products in front of 100% of the store's customers as well as fitting into their existing shopping behavior

Working together to offer lotteries more selling opportunities as well as new and innovative ways to play is the next evolution of lottery retail sales. The Abacus technology enables draw-based lottery tickets and instant games to be purchased at any retail point-of sale-terminal.

The integration of the Abacus Fusion Platform with Scientific Games' SCiQ and AEGIS platforms enable shoppers to securely purchase both instant and draw-based lottery games in-lane at checkout.

This partnership with Abacus is another example of Scientific Games' commitment to invest in new retail innovation that opens opportunities for lotteries to bring products conveniently to players where they are.

SCiQ In-Lane

SCiQ with point of sale integration provides analytical data and advanced reporting for the whole product category

The customer experience of using an integrated SCiQ solution is simple and intuitive puts the product where customers shop the most

Integrating SCiQ into the retail ecosystem opens the door to both lottery and retailer mobile apps

SCiQ reduces shrink of the instant game category in store through the use of a secure ticket dispenser

Integrating SCiQ into the existing store ecosystem enables the possibility of selling instant tickets securely via a 'buy online/pick in store' style solution

SCiQ in-lane integration makes the purchase of an instant ticket the same as other groceries
